

IOTEX™
Anti-Infection Products Inc.

IOTEX™: Future Projects

- The IOTEX™ Gel can be used as an adjunct treatment for psoriasis, eczema and acne, by eliminating topical bacteria and decreasing inflammation.
- An anti-infection vapour (related to the IOTEX™ Sanitizing Spray) to treat respiratory infections including pneumonia, influenza, and maybe T.B.
- The IOTEX™ Solution (related to the IOTEX™ Sanitizing Spray) - to dramatically decrease the risk of infection, before, during and after surgery, especially in third world conditions.
- A protocol for surgery (related to the IOTEX™ Sanitizing Spray) to decrease the possibility of hospital acquired infections (HAI).
- Procedures and equipment to slow down and/or limit the spread of the Ebola virus and similar epidemics.
- An injectable to be used as an adjunct therapy to increase the efficacy of the chemotherapies used to treat some solid cancers.
- Equipment that can be used in agriculture to decrease the need to use antibiotics to decrease the cross-contamination of farm animals.
- Equipment that can be used in aquaculture to prevent and treat infections.
